

Mathematics

Mark scheme for Test 2

Tiers 3–5, 4–6, 5–7 and 6–8

department for

education and skills

creating opportunity, releasing potential, achieving excellence

Introduction

The test papers will be marked by external markers. The markers will follow the mark scheme in this booklet, which is provided here to inform teachers.

This booklet contains the mark scheme for paper 2 at all tiers. The paper 1 mark scheme is printed in a separate booklet. Questions have been given names so that each one has a unique identifier irrespective of tier.

The structure of the mark schemes

The marking information for questions is set out in the form of tables, which start on page 11 of this booklet. The columns on the left-hand side of each table provide a quick reference to the tier, question number, question part, and the total number of marks available for that question part.

The **Correct response** column usually includes two types of information:

- a statement of the requirements for the award of each mark, with an indication of whether credit can be given for correct working, and whether the marks are independent or cumulative;
- examples of some different types of correct response, including the most common.

The **Additional guidance** column indicates alternative acceptable responses, and provides details of specific types of response that are unacceptable. Other guidance, such as when ‘follow through’ is allowed, is provided as necessary.

Questions with a *UAM* element are identified in the mark scheme by an encircled *U* with a number that indicates the significance of using and applying mathematics in answering the question. The *U* number can be any whole number from 1 to the number of marks in the question.

For graphical and diagrammatic responses, including those in which judgements on accuracy are required, marking overlays have been provided at the centre page of this booklet.

The 2005 key stage 3 mathematics tests and mark schemes were developed by the Mathematics Test Development Team at QCA.

General guidance

Using the mark schemes

Answers that are numerically equivalent or algebraically equivalent are acceptable unless the mark scheme states otherwise.

In order to ensure consistency of marking, the most frequent procedural queries are listed on the following two pages with the prescribed correct action. This is followed by further guidance relating to marking of questions that involve money, time, algebra, coordinates, negative numbers or probability. Unless otherwise specified in the mark scheme, markers should apply the following guidelines in all cases.

What if ...

<i>The pupil's response does not match closely any of the examples given.</i>	Markers should use their judgement in deciding whether the response corresponds with the statement of requirements given in the Correct response column. Refer also to the Additional guidance .
<i>The pupil has responded in a non-standard way.</i>	Calculations, formulae and written responses do not have to be set out in any particular format. Pupils may provide evidence in any form as long as its meaning can be understood. Diagrams, symbols or words are acceptable for explanations or for indicating a response. Any correct method of setting out working, however idiosyncratic, is acceptable. Provided there is no ambiguity, condone the continental practice of using a comma for a decimal point.
<i>The pupil has made a conceptual error.</i>	In some questions, a method mark is available provided the pupil has made a computational, rather than conceptual, error. A computational error is a slip such as writing 4 t 6 e 18 in an otherwise correct long multiplication. A conceptual error is a more serious misunderstanding of the relevant mathematics; when such an error is seen no method marks may be awarded. Examples of conceptual errors are: misunderstanding of place value, such as multiplying by 2 rather than 20 when calculating 35 t 27; subtracting the smaller value from the larger in calculations such as 45 – 26 to give the answer 21; incorrect signs when working with negative numbers.
<i>The pupil's accuracy is marginal according to the overlay provided.</i>	Overlays can never be 100% accurate. However, provided the answer is within, or touches, the boundaries given, the mark(s) should be awarded.
<i>The pupil's answer correctly follows through from earlier incorrect work.</i>	Follow through marks may be awarded only when specifically stated in the mark scheme, but should not be allowed if the difficulty level of the question has been lowered. Either the correct response or an acceptable follow through response should be marked as correct.
<i>There appears to be a misreading affecting the working.</i>	This is when the pupil misreads the information given in the question and uses different information. If the original intention or difficulty level of the question is not reduced, deduct one mark only. If the original intention or difficulty level is reduced, do not award any marks for the question part.
<i>The correct answer is in the wrong place.</i>	Where a pupil has shown understanding of the question, the mark(s) should be given. In particular, where a word or number response is expected, a pupil may meet the requirement by annotating a graph or labelling a diagram elsewhere in the question.

What if ...

<i>The final answer is wrong but the correct answer is shown in the working.</i>	Where appropriate, detailed guidance will be given in the mark scheme and must be adhered to. If no guidance is given, markers will need to examine each case to decide whether:	
	the incorrect answer is due to a transcription error;	If so, award the mark.
	in questions not testing accuracy, the correct answer has been given but then rounded or truncated;	If so, award the mark.
	the pupil has continued to give redundant extra working which does not contradict work already done;	If so, award the mark.
	the pupil has continued, in the same part of the question, to give redundant extra working which does contradict work already done.	If so, do not award the mark. Where a question part carries more than one mark, only the final mark should be withheld.
<i>The pupil's answer is correct but the wrong working is seen.</i>	A correct response should always be marked as correct unless the mark scheme states otherwise.	
<i>The correct response has been crossed or rubbed out and not replaced.</i>	Mark, according to the mark scheme, any legible crossed or rubbed out work that has not been replaced.	
<i>More than one answer is given.</i>	If all answers given are correct or a range of answers is given, all of which are correct, the mark should be awarded unless prohibited by the mark scheme. If both correct and incorrect responses are given, no mark should be awarded.	
<i>The answer is correct but, in a later part of the question, the pupil has contradicted this response.</i>	A mark given for one part should not be disallowed for working or answers given in a different part, unless the mark scheme specifically states otherwise.	

Marking specific types of question

Responses involving money <i>For example: £3.20 £7</i>	
Accept ✓	Do not accept x
<p>✓ Any unambiguous indication of the correct amount eg £3.20(p), £3 20, £3,20, 3 pounds 20, £3-20, £3 20 pence, £3:20, £7.00</p> <p>✓ The £ sign is usually already printed in the answer space. Where the pupil writes an answer other than in the answer space, or crosses out the £ sign, accept an answer with correct units in pounds and/or pence eg 320p, 700p</p>	<p>x Incorrect or ambiguous use of pounds or pence eg £320, £320p or £700p, or 3.20 or 3.20p not in the answer space.</p> <p>x Incorrect placement of decimal points, spaces, etc or incorrect use or omission of 0 eg £3.2, £3 200, £32 0, £3-2-0, £7.0</p>

Responses involving time <i>A time interval For example: 2 hours 30 mins</i>	
Accept ✓	Take care ! Do not accept x
<p>✓ Any unambiguous indication eg 2.5 (hours), 2h 30</p> <p>✓ Digital electronic time ie 2:30</p>	<p>x Incorrect or ambiguous time interval eg 2.3(h), 2.30, 2-30, 2h 3, 2.30min</p> <p>! The time unit, hours or minutes, is usually printed in the answer space. Where the pupil writes an answer other than in the answer space, or crosses out the given unit, accept an answer with correct units in hours or minutes, unless the question has asked for a specific unit to be used.</p>
A specific time For example: 8.40am, 17:20	
Accept ✓	Do not accept x
<p>✓ Any unambiguous, correct indication eg 08.40, 8.40, 8:40, 0840, 8 40, 8-40, twenty to nine, 8,40</p> <p>✓ Unambiguous change to 12 or 24 hour clock eg 17:20 as 5:20pm, 17:20pm</p>	<p>x Incorrect time eg 8.4am, 8.40pm</p> <p>x Incorrect placement of separators, spaces, etc or incorrect use or omission of 0 eg 840, 8:4:0, 084, 84</p>

Responses involving the use of algebra	
For example: $2 p n$ $n p 2$ $2n$ $\frac{n}{2}$ n^2	
Accept ✓	Take care ! Do not accept x
<p>✓ Unambiguous use of a different case or variable eg N used for n x used for n</p> <p>✓ Words used to precede or follow equations or expressions eg $t = n p 2$ tiles or tiles = $t = n p 2$ for $t = n p 2$</p> <p>✓ Unambiguous letters used to indicate expressions eg $t = n p 2$ for $n p 2$</p>	<p>! Unconventional notation eg $n t 2$ or $2 t n$ or $n2$ or $n p n$ for $2n$ $n t n$ for n^2 $n d 2$ for $\frac{n}{2}$ or $\frac{1}{2}n$ $2 p 1n$ for $2 p n$ $2 p 0n$ for 2</p> <p>Within a question that demands simplification, do not accept as part of a final answer involving algebra. Accept within a method when awarding partial credit, or within an explanation or general working.</p> <p>x Embedded values given when solving equations eg in solving $3x p 2 = 32$, $3 t 10 p 2 = 32$ for $x = 10$</p> <p>To avoid penalising the two types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of each type within each question. Where a question part carries more than one mark, only the final mark should be withheld.</p> <p>! Words or units used within equations or expressions eg n tiles $p 2$ n cm $p 2$</p> <p>Do not accept on their own. Ignore if accompanying an acceptable response.</p> <p>x Ambiguous letters used to indicate expressions eg $n = n p 2$ for $n p 2$</p>

Responses involving coordinates For example: (5, 7)	
Accept ✓	Do not accept x
✓ Unconventional notation eg (05, 07) (five, seven) $\begin{matrix} x & y \\ (5, & 7) \end{matrix}$ (xe5, ye7)	x Incorrect or ambiguous notation eg (7, 5) $\begin{matrix} y & x \\ (7, & 5) \end{matrix}$ (5x, 7y) (5 ^x , 7 ^y) (x m 5, y m 7)

Responses involving negative numbers For example: m2	
Accept ✓	Do not accept x
	<p>To avoid penalising the error below more than once within each question, do not award the mark for the <i>first</i> occurrence of the error within each question. Where a question part carries more than one mark, only the final mark should be withheld.</p> <p>x Incorrect notation eg 2m</p>

<p>Responses involving probability</p> <p>A numerical probability should be expressed as a decimal, fraction or percentage only.</p> <p>For example: 0.7 or $\frac{7}{10}$ or 70%</p>	
Accept ✓	Take care ! Do not accept x
<p>✓ Equivalent decimals, fractions and percentages</p> <p style="padding-left: 40px;">eg 0.700, $\frac{70}{100}$, $\frac{35}{50}$, 70.0%</p> <p>✓ A probability correctly expressed in one acceptable form which is then incorrectly converted, but is still less than 1 and greater than 0</p> <p style="padding-left: 40px;">eg $\frac{70}{100}$ e $\frac{18}{25}$</p>	<p>The first four categories of error below should be ignored if accompanied by an acceptable response, but should not be accepted on their own. However, to avoid penalising the first three types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of each type of error unaccompanied by an acceptable response. Where a question part carries more than one mark, only the final mark should be withheld.</p> <p>! A probability that is incorrectly expressed</p> <p style="padding-left: 40px;">eg 7 in 10 7 over 10 7 out of 10 7 from 10</p> <p>! A probability expressed as a percentage without a percentage sign</p> <p>! A fraction with other than integers in the numerator and/or denominator</p> <p>! A probability expressed as a ratio</p> <p style="padding-left: 40px;">eg 7 : 10, 7 : 3, 7 to 10</p> <p>x A probability greater than 1 or less than 0</p>

Recording marks awarded on the test paper

All questions, even those not attempted by the pupil, will be marked, with a 1 or a 0 entered in each marking space. Where 2m can be split into 1m gained and 1m lost, with no explicit order, then this will be recorded by the marker as 1
0

The total marks awarded for a double page will be written in the box at the bottom of the right-hand page, and the total number of marks obtained on the paper will be recorded on the front of the test paper.

A total of 120 marks is available in each of tiers 3–5 and 4–6.

A total of 121 marks is available in each of tiers 5–7 and 6–8.

Awarding levels

The sum of the marks gained on paper 1, paper 2 and the mental mathematics paper determines the level awarded. Level threshold tables, which show the mark ranges for the award of different levels, will be available on the QCA website www.qca.org.uk/ from Monday 20 June 2005. QCA will also send a copy to each school in July.

Schools will be notified of pupils' results by means of a marksheet, which will be returned to schools by the external marking agency with the pupils' marked scripts. The marksheet will include pupils' scores on the test papers and the levels awarded.

Tier & Question				4 by 4 grid	
3-5	4-6	5-7	6-8		
1				Correct response	Additional guidance
a				<p>1m Correctly divides the square into quarters in a different way from the given example eg</p> <ul style="list-style-type: none"> ▪  ▪  ▪  ▪  	<p>! <i>Throughout the question, lines not ruled or accurate, or lines not using the intersections of the grid</i> Accept provided the pupil's intention is clear</p> <p>! <i>Throughout the question, quarters or eighths are not congruent</i> Accept provided the intention is clear for all pieces to have the same area eg, for part (a) accept</p> <ul style="list-style-type: none"> ♦  ♦  <p>eg, for part (b) accept</p> <ul style="list-style-type: none"> ♦ 
b				<p>1m Correctly divides the square into eighths eg</p> <ul style="list-style-type: none"> ▪  ▪  ▪  	

Heating

Tier & Question						
3-5	4-6	5-7	6-8			
2					Correct response	Additional guidance
a				1m	Indicates the correct times in the correct order eg • 6 and 9:30	<p>✓ <i>Indication of morning</i> eg • 6 am and 9:30 am</p> <p>! <i>Times not accurate</i> Accept in 5 minutes of the correct times eg, for 9:30 accept • 9:25 to 9:35 inclusive</p> <p>! <i>Use of 'half'</i> Accept colloquial use of 'half' or $\frac{1}{2}$ eg, for 9:30 accept • Half (or $\frac{1}{2}$) 9 Do not accept an incorrect time eg, for 9:30 do not accept • 9 half (or $\frac{1}{2}$)</p> <p>✗ <i>Time(s) incorrect</i> eg • 6 pm and 9:30 • 6 and 21:30 • 6 and 9.5</p>
				1m	$3\frac{1}{2}$ or equivalent	<p>! <i>Follow through from the first mark</i> Accept as the time interval between their two times, provided their answer is not a whole number of hours</p> <p>! <i>'Half' in words</i> Condone eg, accept • 3 and a half</p>
b				2m	Indicates only 17:(00) and 23:(00) correctly on the diagram, with no incorrect times shown	<p>! <i>Positions not accurate</i> Accept provided the pupil's intention is clear</p>
				or 1m	Indicates either 17:(00) or 23:(00) correctly on the diagram, with not more than one error or Indicates any two times on the diagram with a difference of 6 hours	<p>! <i>Arrows do not indicate 'on' or 'off'</i> For 2m, condone unless the times are incorrectly labelled as 'on' or 'off' In this case, mark as 1, 0 For 1m, ignore any labels</p>

Tier & Question					Tickets	
3-5	4-6	5-7	6-8			
3					Correct response	Additional guidance
a				1m	5	<p>✗ <i>For the first mark, £5</i></p> <p>! <i>Values not rounded</i> Penalise only the first occurrence, even if the non-integer part is incorrect eg, for parts (a) and (b) ♦ 5.2(...) or 5.3 6.8(...) or 6.9 Mark as 0, 1</p>
b				1m	6	
c				1m	£ 22	
				(U1)		

Tier & Question					Unit	
3-5	4-6	5-7	6-8			
4					Correct response	Additional guidance
a					<p>1m Indicates grams</p> <p>1m Indicates litres</p>	<p>✓ <i>Unambiguous indication</i></p> <p>! <i>For both responses, correct but less suitable units indicated</i> Mark responses of kilograms then millilitres as 0, 1</p>
b					<p>1m Indicates one of the given units not credited in their (a), and gives an example of something it could measure</p> <p>eg</p> <ul style="list-style-type: none"> ▪ Use metres to measure the distance of a running track ▪ Use millimetres to measure the length of a ruler ▪ Use kilograms to measure the mass of a person [only if kilograms not given for the first mark in (a)] ▪ Use millilitres to measure the volume of drink in a can [only if millilitres not given for the second mark in (a)] ▪ Use grams to measure the mass of a piece of cheese [only if grams not given for the first mark in (a)] ▪ Use litres to measure the capacity of water in a swimming pool [only if litres not given for the second mark in (a)] 	<p>! <i>Imprecise description of the property to be measured</i> Condone provided the pupil's intention is clear eg, accept</p> <ul style="list-style-type: none"> ♦ Use metres to measure the size of a garden ♦ Use millilitres to measure the amount/quantity of drink in a can ♦ Use kilograms to measure the weight of a person <p>! <i>Units for the correct property given, but not the most suitable for their example</i> Condone eg, accept</p> <ul style="list-style-type: none"> ♦ Use millilitres to measure the volume of water in a swimming pool <p>! <i>Property given with object unspecified or omitted</i> Condone eg, accept</p> <ul style="list-style-type: none"> ♦ Use millimetres to measure the length of something ♦ Use kilograms to measure the mass <p>✗ <i>Object given without explicit indication of the property to be measured</i> eg</p> <ul style="list-style-type: none"> ♦ Use millimetres to measure a ruler ♦ Use kilograms to measure a person <p>✗ <i>Units used that are not from the given list</i> eg</p> <ul style="list-style-type: none"> ♦ Use centimetres to measure the length of a ruler

U1

Tier & Question					Paralympics				
3-5	4-6	5-7	6-8						
5					Correct response	Additional guidance			
a				1m	19	<p>✗ <i>For part (a), m19</i></p>			
b				1m	2100	<p>✗ <i>For part (b), m2100</i></p> <p>! <i>Responses to parts (a) and (b) transposed but otherwise correct</i> Mark as 0, 1</p>			
c				2m	<p>Completes the three entries of the table correctly, ie</p> <table border="1" style="margin-left: 40px;"> <tr> <td style="width: 50px; text-align: center;">123</td> <td style="width: 100px; text-align: center;">Australia</td> <td style="width: 50px; text-align: center;">3824</td> </tr> </table>	123	Australia	3824	<p>! <i>Abbreviation or incorrect spelling of Australia</i> Condone eg, accept ♦ Aus ♦ A</p>
123	Australia	3824							
				or 1m	Shows the value 123 or 3824, even if in an incorrect position	<p>! <i>For 2m or 1m, 3824 rounded</i> Accept 3800 or 3820 Do not accept 4000</p>			

Tier & Question					Half price	
3-5	4-6	5-7	6-8			
6					Correct response	Additional guidance
a				1m	£ 2.84	
b				1m	£ 13.98	

Tier & Question					Teachers	
3-5	4-6	5-7	6-8			
7					Correct response	Additional guidance
a				1m	187 860	
b				1m	1350	✗ m1350

Tier & Question					Membership	
3-5	4-6	5-7	6-8			
8	1				Correct response	Additional guidance
a	a			1m	October	<p>✓ <i>Unambiguous indication of month</i> eg • O</p> <p>! <i>Correct frequency of 32 given</i> Ignore alongside indication of the correct month, but do not accept on its own</p>
b	b			1m	11	

Tier & Question				Factor	
3-5	4-6	5-7	6-8	Correct response	Additional guidance
9	2				
a	a			1m Indicates Yes and gives a correct explanation eg <ul style="list-style-type: none"> • $3 \nmid 10 = 30$ • $30 \div 3 = 10$ • 30 is a multiple of 3 • 3 goes into 30 exactly • 30 is in the 3 times table 	<p>✓ <i>Minimally acceptable explanation</i> eg</p> <ul style="list-style-type: none"> ♦ $3 \nmid 10$ ♦ $30 \div 3$ has no remainder ♦ 30 divides by 3 ♦ 3 goes into 30 ♦ $30 \div 10$ ♦ $3 \times 0 = 3$ which is in the 3 times table <p>! <i>Use of repeated addition</i> Condone eg, accept</p> <ul style="list-style-type: none"> ♦ Keep going up in 3s and you get to 30 <p>! <i>Use of 'it' or other ambiguous language</i> Condone provided either 3 or 30 is used, implying 'it' is the other number eg, accept</p> <ul style="list-style-type: none"> ♦ 30 divides by it ♦ The lower number goes into it ♦ It's in the 3 times table <p>eg, do not accept</p> <ul style="list-style-type: none"> ♦ It goes into it 10 times <p>! <i>Response contains an incorrect statement</i> Ignore alongside a correct response eg, accept</p> <ul style="list-style-type: none"> ♦ 30 divides by 3 as 3 is a multiple of 30 <p>eg, do not accept</p> <ul style="list-style-type: none"> ♦ $3 \div 30 = 10$ ♦ 30 goes into 3 exactly <p>✗ <i>Incomplete or incorrect explanation</i> eg</p> <ul style="list-style-type: none"> ♦ 3 is a factor of 30 ♦ $30 \div 3$ ♦ It adds up to 30 ♦ They're both in the 3 times table ♦ Because there is a 3 in it
b	b		(U1)	1m Gives a factor of 30 greater than 3, ie 5, 6, 10, 15 or 30	

Tier & Question				Shapes on a grid	
3-5	4-6	5-7	6-8		
10	3			Correct response	Additional guidance
a	a			1m 20	
b	b			1m 60	! <i>Follow through</i> Accept follow through as their (a) t 3, provided their (a) was not 5
c	c			1m 4	! <i>Operation repeated</i> eg ♦ t 4 Condone X <i>More than one number given</i> eg ♦ 2 t 2
				(U1)	

Tier & Question				Meal	
3-5	4-6	5-7	6-8		
11	4			Correct response	Additional guidance
				2m £ 276 <i>or</i> 1m Shows the digits 276 eg ▪ 2.76 or Shows the value 23, with no evidence of an incorrect method or Shows or implies a complete correct method with not more than one computational or rounding error eg ▪ $\frac{253}{11}$ t 12 ▪ 253 d 11 e 13 (<i>error</i>) 253 p 13 e 266 ▪ 12 d 11 e 1.09(...), 1.09 (<i>premature rounding</i>) t 253 e 275.77	X <i>For 1m, incorrect method</i> eg ♦ 11 p 12 e 23

Tier & Question								Rhombus area																									
3-5	4-6	5-7	6-8																														
12	5																																
								Correct response	Additional guidance																								
a	a			1m	10.2 to 10.4 inclusive and 6.6 to 6.8 inclusive, in either order				✓ <i>Throughout the question, equivalent fractions or decimals</i>																								
b	b			1m	<p>Gives the correct area using their values for the lengths of the diagonals in part (a)</p> <p>eg</p> <ul style="list-style-type: none"> ▪ From 10.3 and 6.7 in part (a), area of 34.505 (or 3450.5) <p>or</p> <p>Gives the correct area using two values seen in part (b), even if they are different from their values for the lengths of the diagonals in part (a)</p> <p>eg</p> <ul style="list-style-type: none"> ▪ From 10 and 7 seen in part (b), area of 35 			<p>✓ <i>Follow through as the product of their two values for part (a) d 2</i></p> <p>As this is an algebra mark, accept follow through from whole numbers as well as decimals</p> <p>! <i>For part (b), their value rounded</i></p> <p>Accept correct rounding to the nearest integer or better, or truncation to one decimal place or better</p> <p>Do not accept incorrect rounding or truncation to an integer unless a correct method or a more accurate value is seen</p> <p>Markers may find the following values for the diagonals and corresponding areas useful: (error)</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th>6.5</th> <th>6.6</th> <th>6.7</th> <th>6.8</th> </tr> </thead> <tbody> <tr> <td>10.2</td> <td>33.15</td> <td>33.66</td> <td>34.17</td> <td>34.68</td> </tr> <tr> <td>10.3</td> <td>33.475</td> <td>33.99</td> <td>34.505</td> <td>35.02</td> </tr> <tr> <td>10.4</td> <td>33.8</td> <td>34.32</td> <td>34.84</td> <td>35.36</td> </tr> <tr> <td>10.5 (error)</td> <td>34.125</td> <td>34.65</td> <td>35.175</td> <td>35.7</td> </tr> </tbody> </table>		6.5	6.6	6.7	6.8	10.2	33.15	33.66	34.17	34.68	10.3	33.475	33.99	34.505	35.02	10.4	33.8	34.32	34.84	35.36	10.5 (error)	34.125	34.65	35.175	35.7
	6.5	6.6	6.7	6.8																													
10.2	33.15	33.66	34.17	34.68

			a	2m	21	<p>! Method uses a numerical value for the sides of the square For 1m, accept a complete correct method with not more than one computational error eg, for a square of side 6</p> <ul style="list-style-type: none"> • 6.6^2 d 36 t 100 e 124 (error) <p>Answer: 24%</p> <p>Do not accept a conceptual error such as doubling rather than squaring, or any other error that would lead to a percentage decrease rather than a percentage increase</p>
				or 1m	Shows a correct method eg <ul style="list-style-type: none"> ▪ $(1.1)^2$ ▪ Digits 121 seen 	
			b	2m	4 (decrease) or m4	<p>✓ For 2m, 4 with no indication of 'decrease'</p> <p>✗ For 2m, indication of a 4% increase</p>
				or 1m	Indicates a 4% increase or Shows or implies a complete correct method with not more than one error eg <ul style="list-style-type: none"> ▪ $100 \text{ m } \frac{120}{100}$ t 80 ▪ Digits 96 seen, with no evidence of an incorrect method ▪ 1.2 t 0.8 e 0.92 (error), so 8% ▪ 20% of 100 e 20, 100 p 20 e 120, 20% of 120 e 26 (error), 120 m 26 e 94, so 6% 	

Tier & Question					Which graph?	
3-5	4-6	5-7	6-8			
			20		Correct response	Additional guidance
			a	1m	Indicates graph D	
			b	1m	Indicates graph C	
			c	1m	Indicates graph B	

Tier & Question					Side and angle	
3-5	4-6	5-7	6-8			
			21		Correct response	Additional guidance
		a	2m	17 or 17.2(...), with no evidence of accurate or scale drawing		
			or 1m	Shows or implies a correct method with not more than one computational or rounding error eg <ul style="list-style-type: none"> ▪ $28 \nabla \cos 52$ ▪ $\cos 52 \nabla 0.62$ (<i>premature rounding</i>), $28 \nabla 0.62 \nabla 17.36$ ▪ $28 \sin 38$ or Shows a correct trigonometric ratio eg <ul style="list-style-type: none"> ▪ $\cos 52 \nabla \frac{w}{28}$ ▪ $\sin 38 \nabla \frac{w}{28}$! <i>For 1m, incomplete notation that omits the angle</i> eg ♦ $\cos = \frac{w}{28}$ Do not accept unless evaluation or other indication shows that the relevance of the angle has been understood
		b	2m	35 or 34.9(...), with no evidence of accurate or scale drawing		
			or 1m	Shows or implies a complete correct method with not more than one computational or rounding error eg <ul style="list-style-type: none"> ▪ $\tan^{-1} \frac{42}{60}$ ▪ $\tan^{-1} 0.7$ ▪ Answer of 34 or Shows a correct trigonometric ratio eg <ul style="list-style-type: none"> ▪ $\tan x \nabla \frac{42}{60}$ ▪ $\tan y \nabla \frac{60}{42}$ [unmarked angle labelled as y] or The only error is to find the unmarked angle, ie gives an answer of 55 or 55.1(...), with no evidence of accurate or scale drawing		✓ <i>For 1m, incomplete but unambiguous notation</i> eg ♦ $\tan = \frac{42}{60}$

Tier & Question					22	Correct response	Additional guidance
3-5	4-6	5-7	6-8				
				a	<p>1m Shows or implies correct substitution into the formula with correct evaluation of at least the part in brackets</p> <p>eg</p> <ul style="list-style-type: none"> ▪ Value between 1134 and 1147 inclusive ▪ 1150 ▪ 365π ▪ $\frac{1}{3} \pi \pi \pi 5 \pi 219$ ▪ $5.2(\dots) \pi 219$ <p>1m Shows the correct value for the volume of the bowl to 3 significant figures, ie 1150</p>	<p>! <i>For the first mark, value(s) rounded</i></p> <p>For $\frac{1}{3}$, accept 0.33 or better</p> <p>For π, accept 3.14 or 3.142 or better</p> <p>eg, for the first mark accept</p> <ul style="list-style-type: none"> ♦ 0.33 t 3.14 t 5 t 219 ♦ $5.1(\dots) \pi 219$ <p>! <i>For the second mark, follow through from an incorrect volume or incorrect working</i></p> <p>Accept provided their volume is greater than 1000, and needs rounding to be given correct to 3 significant figures</p> <p>eg, from their volume as 1031.(...) or working of 4.71(...) t 219 accept</p> <ul style="list-style-type: none"> ♦ 1030 <p>eg, from their volume as 1030 with no working, do not accept</p> <ul style="list-style-type: none"> ♦ 1030 	
				b	<p>1m Gives a correct formula</p> <p>eg</p> <ul style="list-style-type: none"> ▪ $\frac{1}{3} \pi a^2 h$ ▪ $\frac{\pi h a^2}{3}$ 	<p>! <i>Unconventional notation</i></p> <p>Condone</p> <p>eg, accept</p> <ul style="list-style-type: none"> ♦ $\pi \pi h \pi a \pi a \pi d 3$ <p>X <i>Formula not completely simplified</i></p> <p>eg</p> <ul style="list-style-type: none"> ♦ $\frac{\pi h a^2}{3a}$ <p>X <i>Incorrect name for variable within the context of the question</i></p> <p>eg</p> <ul style="list-style-type: none"> ♦ $\frac{1}{3} \pi r^2 h$ 	

Tier & Question					Two circles	
3-5	4-6	5-7	6-8			
			23		Correct response	Additional guidance
			a	1m	<p>Gives a correct explanation</p> <p>eg</p> <ul style="list-style-type: none"> Since BC is a diameter of the smaller circle, any angle made by joining points B and C to a point on the circle's circumference must be 90° BC is a diameter (given) A is on the circumference (intersection of circles) $\therefore \angle BAC = 90^\circ$ Angle BAC is an angle in a semicircle, so it must be a right angle 	<p>✓ <i>Minimally acceptable explanation</i></p> <p>eg</p> <ul style="list-style-type: none"> BC is a diameter Angles in a semicircle <p>✗ <i>Incomplete or incorrect explanation</i></p> <p>eg</p> <ul style="list-style-type: none"> Angle BAC must be 90° Semicircle AB is a radius of the large circle, and AC is a tangent of the larger circle, so they must be at right angles
			b	2m	8, with no evidence of accurate or scale drawing	
				<i>or</i> 1m	<p>Shows the value 64</p> <p>or</p> <p>Shows sufficient working to indicate correct application of Pythagoras' theorem</p> <p>eg</p> <ul style="list-style-type: none"> $10^2 + 6^2$ $\sqrt{100 + 36}$ $10 + 10 + 6 + 6$ <p>or</p> <p>States or implies that triangle ABC is an enlargement of a 3, 4, 5 right-angled triangle</p> <p>eg</p> <ul style="list-style-type: none"> It's a 3, 4, 5 triangle with sides $\times 2$ <p>or</p> <p>Shows a complete correct method with not more than one computational error</p> <p>eg</p> <ul style="list-style-type: none"> $AC^2 = 11^2$ (error) $+ 6^2$ $= 85$ $AC = 9.2$
